Environmental Policy

Prepared in line with ISO 14001:2015 – certification targeted for 2027

Our commitment

- Comply with environmental legislation and the requirements of our customers.
- Use energy efficiently and increase the share of renewable electricity – our 1 MWp rooftop solar plant has been in operation since 2023.
- Measure our greenhouse-gas emissions (ISO 14064-1) and reduce them against published targets.
- Segregate and recycle production scrap – stainless steel, resistance wire and brass – and minimise waste to landfill.
- Prefer processes with lower impact, such as bright annealing under protective atmosphere instead of acid pickling.
- Prevent pollution of soil, water and air, and be prepared for emergencies.
- Design elements with the right surface load and materials so that they last longer and transfer heat efficiently in the appliance.
- Provide the data our customers need – RoHS, REACH, CBAM and carbon-footprint information.
- Set environmental objectives, review them yearly and improve continually.
