Responsible Minerals Statement

Tin, tantalum, tungsten and gold (3TG) and other minerals of concern

Position

BALÇIK TORMEC does not knowingly use minerals that finance armed conflict or are linked to serious human-rights abuses. We follow the principles of the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.

Relevance to our products

Our tubular heating elements are made mainly of stainless steel or Incoloy® sheaths, iron-chromium-aluminium or nickel-chromium resistance wire, magnesium oxide and brass or stainless fittings. Tantalum, tungsten and gold are not used. Tin can be present in small quantities in purchased components such as brass alloys, solders or platings.

What we do

- Ask relevant suppliers for the origin of 3TG and for a completed Conflict Minerals Reporting Template (CMRT).
- Prefer smelters and refiners validated under the Responsible Minerals Assurance Process (RMAP).
- Include responsible sourcing in our supplier requirements and evaluations.
- Provide our own CMRT and, where requested, the Extended Minerals Reporting Template (EMRT) to customers.
